

Cisco Meraki via Syslog

1. Login to Cisco Meraki Dashboard:

- Go to the **Meraki Dashboard** and log in with your credentials.

2. Navigate to Alerts & Administration:

- Go to **Network-wide** → **Alerts & Administration**.

3. Set up Syslog Server:

- Under the **Alert recipients** section, select **Syslog** as the alert recipient.
- Add the IP address and port of the Syslog server where the alerts should be sent.
 - Example Syslog Server IP: `10.0.0.1` (Replace this with your server IP)
 - Example Port: `514` (Standard Syslog port)

4. Enable Relevant Alerts:

- Enable the types of alerts you want Meraki to send, such as security events, device status, and network performance issues.
